

Risk Assignment

Risk List

Technical

1. **Integration Failures:** Inability to smoothly integrate the new blockchain and AI components with UnchainCorp's existing legacy systems
2. **Predictive Inaccuracies:** The AI models may produce flawed or inaccurate predictive insights for investment opportunities.
3. **High Technical Debt:** Poor architectural decisions or messy code caused by the in-house team's unfamiliarity with the new tech stack.
4. **Performance Bottlenecks:** Unforeseen technical challenges leading to slow processing speeds or system instability.
5. **Scalability Issues:** The chosen blockchain architecture may struggle to scale effectively as the user base grows.

Operational

6. **Extended Timelines:** Significant delays in the development schedule as the in-house team navigates the steep learning curve.
7. **Budget Overruns:** Project costs exceeding estimates due to the need for external consultants or extended development time.
8. **Productivity Loss:** Severe bottlenecks caused by the identified team skill gaps.
9. **Team Burnout:** In-house developers becoming overwhelmed or leaving the company due to the stress of working with unfamiliar technologies.
10. **Inadequate Testing:** Inability to properly test the new tool due to a lack of operational experience with AI and blockchain edge cases.

AI Hallucination

Strategic

11. **Loss of Competitive Edge:** Competitors successfully launching similar predictive features before UnchainCorp finishes development.
12. **Threat to Viability:** A complete project failure severely impacting the future financial viability of the company.
13. **Market Positioning Damage:** Extended timelines causing UnchainCorp to miss crucial market windows.
14. **Decreased Customer Satisfaction:** The tool failing to meet user expectations, damaging trust in the brand.
15. **Missed Growth Objectives:** The failure of the new financial analysis tool to attract new investments, directly hindering strategic growth.

Compliance

16. **Regulatory Violations:** The AI's predictive financial advice violating industry regulations.
17. **Data Privacy Breaches:** Using immutable blockchain ledgers that conflict with data deletion rights (e.g., GDPR).
18. **Audit Failures:** Inability to pass regulatory audits due to the "black box" nature of the AI models.
19. **Unlicensed Operations:** Deploying new financial tools without acquiring the necessary updated regulatory licenses.

Security

20. **Smart Contract Vulnerabilities:** Exploitable bugs in the blockchain code leading to financial loss.
21. **Data Leaks:** Accidental exposure of sensitive financial data by an inexperienced team mishandling the new tech stack.
22. **AI Data Poisoning:** Malicious actors manipulating the data used to train the predictive AI models.
23. **Increased Attack Surface:** The introduction of completely unfamiliar technologies opening new, unforeseen vectors for cyberattacks.
24. **Inadequate Encryption:** Failure to properly secure data both in transit and at rest within the new architecture.

Risk Table

	Negligible	Minor	Moderate	Significant
Very Likely		8	3, 24	1, 6
Likely		9	4, 7, 13, 18	10, 11, 22
Possible			5, 14	2, 15, 16, 17, 20, 21
Unlikely		23	25	12, 19

How to Mitigate Risks
